摘要

苗栗撈龍為具地方特色之客家元宵民俗。本平台以糊龍、祥龍點睛、迎龍、跔龍、撈龍及化龍返天六個核心階段作為學習架構。然而，現有數位內容多以圖文或影音呈現，較難整合儀式流程、地方場域、客語學習與客家八音聲景。為提升文化理解與互動參與，本研究採文化內容整理、場域對應及遊戲化轉譯方法，建置「跟著祥龍走」撈龍文化互動學習平台。系統依六個核心階段之儀式情境與主要樂器配置，將使用者選擇轉換為結構化提示詞，再透過生成式音樂模型產生六段個人化客家八音聲景，並整合祥龍角色客製化、2D 角色扮演遊戲、客語互動任務及苗栗觀光資訊。使用者依序前往玉清宮前廣場、玉清宮、苗栗市全民運動館、貓裏喵親子公園、經國路河濱公園及西山聖帝廟，透過龍被設計、點睛、蒐集紅包、客語學習、舞步辨識教學與化龍儀式，理解各階段之文化意涵。目前已完成核心互動流程之功能原型，期望作為客家文化教育、節慶展示及地方觀光推廣之數位應用。

關鍵詞：撈龍文化、客家八音、生成式人工智慧、文化數位轉譯、遊戲化學習、客語互動學習

**Follow the Auspicious Dragon: An Interactive and Experiential
Learning Platform for the Miaoli Dragon Bombing Tradition**

Abstract

Miaoli Dragon Bombing is a distinctive Hakka folk tradition celebrated during the Lantern Festival. The platform adopts six core stages as its learning framework: dragon-making, dragon eye-dotting, welcoming the dragon, following the dragon, dragon bombing, and sending the

dragon back to the sky. Existing digital materials are mainly presented through text, images, or videos, making it difficult to integrate ritual processes, local venues, Hakka language learning, and soundscapes based on Hakka eight tones. To enhance cultural understanding and interactive participation, this study applies cultural content curation, spatial mapping, and cultural translation through gamification to develop “Follow the Auspicious Dragon,” an interactive and experiential learning platform for the Miaoli Dragon Bombing tradition. Based on the ritual context and primary instrumentation of the six core stages, the system converts user selections into structured prompts and uses a generative music model to produce six personalized soundscapes based on Hakka eight tones. It further integrates auspicious dragon character customization, a 2D role-playing game, interactive Hakka language tasks, and Miaoli tourism information. Users travel sequentially to Yuqing Temple Plaza, Yuqing Temple, Miaoli City Sports Center, Maolimiao Family Park, Jingguo Road Riverside Park, and Xishan Shengdi Temple. Through the design of the dragon-body fabric covering, dragon eye-dotting, red-envelope collection, Hakka language learning, dragon-dance movement recognition and instruction, and the ritual of sending the dragon back to the sky, users learn the cultural meaning of each stage. A functional prototype integrating the core interaction flow has been completed. The platform is expected to support Hakka cultural education, festival exhibitions, and local tourism promotion.
